

Airmec Waste Handling System Spares

REVERSE - JET FILTERS

CUTTER/CONVEYOR FANS

COMPACTOR & SEPARATOR ASSEMBLIES

ATTENTION...MAINTENANCE DEPARTMENT!

.....

Ask yourself these questions: -

- “Have I previously been limited to one source for waste extraction system spares?”
- “Does my current system supplier try to fob me off with the old adage – “genuine parts” or even “only legitimate source of purpose-designed spares.”
- “Have they become complacent and apply charges well in excess of the market price, because they believe I will not try to source elsewhere?”

If your answer is **“yes”** to any of the above and you have no benchmark by which to compare prices, then why not make a quick call or send a fax detailing your requirements to:

AIRMEC DESIGN LIMITED

If anything, our response will at least give you the ammunition to help drive down your current suppliers prices and ensure you pay current market value (if you should choose to stay with them?).

Make that call !..... Compare our prices and help to reduce your company’s running costs – we are never knowingly undersold

Airmec Design Limited has over 15 years’ hands on experience of economical production waste handling. We design, manufacture and install process waste handling systems for print finishers, corrugated box and carton manufacturers, providing a full range of system spares and 24-hour service support for all the leading manufacturer’s waste extraction systems.

Airmec Design Limited, Clarence House, 30 Queen Street, Market Drayton, Shropshire. TF9 1PS.

Cutter/Conveyor Fans

SPARES AVAILABILITY :-

Complete impeller assembly.
Cutting blade sets.
All drive belts.
Bearing blocks with shaft and keys.
Shaft and bearings only.
Automatic greasing units.

Airmec Cutter/Conveyor fans are equipped with high tensile steel impellers specifically designed for handling large volumes of waste materials and are built for heavy industrial use. They should not be confused with lightweight fans or those made from mild steel. The fan impeller runs on twin heavy-duty bearing blocks and is equipped with replaceable hardened steel cutting blades, which are of particular benefit when handling large volumes of waste materials. All fans are fitted with external grease nipples connected to the fan bearing assembly.

Rotary Valves

SPARES AVAILABILITY :-

Gear box & motors.
Rotor assemblies.
Bearings
Valve seals.
Limit switches for torque limiter.
Striker plates.
Rubber stops set.
Oil.

Airmec Rotary Valves are large diameter, heavy duty units designed exclusively for handling paper, and board waste; they should not be confused with smaller lightweight units which have a tendency to jam when passing large volumes of material.

Each of its rotor blades is fitted with a wear resistant seal (not the more common canvas backed rubber) to ensure high reliability waste transfer and to provide the necessary air seal to the system. Each unit is fitted with an adjustable torque sensor to provide protection of the equipment.

Airmec CA Reverse - Jet Filters

SPARES AVAILABILITY :-

Control Panels.
Diaphragm Repair Kit.
Air Solenoid Valves
Solenoid Coils.
Filter Socks.
Explosion Door Seals.
Ratchet Strap.
Hopper Valve Seals.
Filter Media.
Plastic Sacks.

Airmec CA Reverse Jet Filters have been developed specifically for the print, paper and board converting industries to provide high quality air cleaning in true non-stop 24-hour operation, handling large volumes of contaminated air.

The quality of the air returned from our CA filters is some ten times better than current U.K. requirements. In addition, the filtering and returning of the conveying air to the main production area avoids the building operating under negative pressure, overcoming cold draughts, ingress of dirt from outside. All of this is particularly important to those companies wishing to achieve or maintain ISO 14001, or even those who just supply goods to the food industry.

Other System Spares

OTHER AVAILABILITY :-

PNEUMATIC DIVERTER COMPONENTS.
ELECTRIC MOTORS.
HIGH LEVEL ALARM INDICATORS.
DUCTING AND FITTINGS
COMPACTOR AND BALER PARTS.
BELT CONVEYORS.
SHREDDERS

Airmec's Extensive Range of Services Includes: - **Process Waste Extraction Systems** | **Dust Filtration Solutions** | **Fume Extract & Ventilation** | **LEV Testing** | **System Service & Maintenance** | **Spare Parts Stockist & Bespoke Manufacture**
